

An integrated, evidence-driven governance and assurance system that continuously assesses and evolves digital value, resilience, trust, and accountability across complex digital ecosystems

Digital Value Management System® (DVMS)

The **Digital Value Management System® (DVMS)** is an integrated, evidence-driven governance and assurance system that continuously assesses and evolves digital business value, resilience, trust, and accountability across complex digital ecosystems.

Rather than replacing existing technologies, the DVMS overlays them with structured governance, aligning strategy with execution and standardizing how controls, decisions, and performance are measured and validated.

By integrating digital frameworks (**NIST, ITIL**), standards (**ISO, COSO**), and operational activities (**DevOps, Workflow, Discovery, and AI Systems**) into a continuous flow of evidence, DVMS eliminates silos, provides real-time visibility, and establishes clear ownership across the enterprise.

This enables organizations to move from disconnected, reactive operations to a coordinated, resilient, and audit-ready digital ecosystem where security, compliance, and performance are continuously assured as part of how the business operates.

Learning Pathway to Building a DVMS Program

Through structured learning, applied certification, and authoritative publications, The **DVMS Certified Training Programs** teach organizations how to build an integrated, evidence-driven governance and assurance system that continuously assesses and evolves digital business value, resilience, trust, and accountability across complex digital ecosystems.

Launching a DVMS Program

It all starts with selecting the first digital service you want to operate with the new DVMS capabilities. It will serve as the blueprint for the remaining services.

DVMS Institute Partner Program

- TSO Content Licensing
- APMG International Instructor Accreditation and Exam Services
